EDUCATION

University of Windsor

Jan 2025 - Apr 2026

Masters of Management in Business Data Analytics

JSS Science and Technology University

Aug 2018 - May 2022

Bachelors of Engineering

TECHNICAL SKILLS

Programming & Databases: Python, SQL, R

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Predictive Modeling

Statistics & Analytics: Statistical Analysis, Hypothesis Testing, A/B Testing, Exploratory Data Analysis (EDA)

Data Visualization: Matplotlib, Seaborn, Plotly, Power BI, Tableau, Excel

Cloud & Platforms: AWS, Azure, Google Cloud Platform, Microsoft Fabric

Certifications: Microsoft Business Analyst Associate, Tableau Professional Business Intelligence Analyst

EXPERIENCE

TD Canada Trust

Windsor, Canada

Customer Experience Associate

Dec 2025 – Present, Part-time

- Handle client transactions and account-related requests while maintaining accuracy, confidentiality, and compliance with TD policies and procedures.
- Flagged recurring gaps in day-to-day reporting to branch leadership and proposed process adjustments to address them
- Communicate financial and account information clearly to clients with varying levels of financial literacy.

Janes

Bangalore, IN

Data Analyst

Nov 2022 – Dec 2024

- Automated repetitive data cleaning and formatting tasks using **VBA macros**, eliminating a manual step analysts previously performed after exporting data before loading it into the internal analytics tool.
- Applied quantitative and machine learning methods (**Azure ML, Random Forest, NLP**) to analyze and categorize defence spending with 90% accuracy, improving data quality for financial reporting and decisions.
- Identified and implemented an automated push notification workflow (Microsoft Power Automate), validated through **A/B testing** and market analysis — increasing sales and services conversions by over 20%.
- Built automated reporting tools using **Power BI** and **Excel** (pivot tables, DAX), streamlining data access and reducing manual reporting effort for the sales team.
- Presented findings, recommendations, and project outcomes to client and internal stakeholders through comprehensive analytical reports.

PROJECTS

Cash vs. Card: Uncovering NYC's Taxis Payment Preferences | [Blog link](#)

- Analyzed NYC taxi data to investigate payment method and fare relationships using Python (Pandas, SciPy, Matplotlib). Performed data cleaning, preprocessing, exploratory data analysis (EDA), hypothesis testing, and two-sample t-tests. Applied statistical analysis and visualization to identify patterns.

Mortgage Credit Risk Analytics & Default Prediction | [GitHub](#)

- Built an end-to-end mortgage credit risk analytics pipeline using Freddie Mac loan-level data (2005–2012), developing a Logistic Regression model to predict mortgage default risk, evaluating model performance on post-crisis mortgage data, and implementing an interactive Streamlit dashboard for ongoing performance monitoring and governance-focused decision support.

Finding Your Perfect Toronto Neighbourhood: A Data-Driven Guide for Newcomers | [Blog Link](#)

- Developed an interactive neighborhood analytics dashboard using Tableau by integrating Toronto Open Data (2021 Census), library, school, park, and recreation datasets to analyze demographic, socioeconomic, and public amenity patterns across Toronto's 25 wards. Performed exploratory data analysis to identify neighborhood trends for young professionals, families, and retirees, enabling data-driven location recommendations through interactive geospatial visualizations and demographic insights. Featured in **City of Toronto's** data portal.
